

Off-the-grid house

Category	Country Houses Interior Designs	Authors Alexander Poroshkin Ekaterina Zrazhevskaya Ilya Korenev
Square	65 m ²	
Year	2013	
Client	Pavel Bobkov	

The task was to design a house to be quickly installed on any site, and initially ready for comfortable year-round living.

An off-the-grid house is a solution based on two containers that can be transferred on two trucks to any place. Preliminary land development of the installation site for the house is minimal, since the built-in power unit equipped with all engineering systems allows living without external energy sources.
