

Bitsa Park

Category	Public Buildings	Authors
Location	Moscow	Alexander Poroshkin
Year	2012	Mitya Zrazhevsky
Client	INGRAD Project	P.Yu. Remizov

For the Bitsa Park shopping complex several facade design solutions were developed.

The architects have taken into account that in addition to information and commercial functions, the facade can also serve as a navigation and lighting element. In this regard, facades were proposed that are highlighted in the dark, a design with perforation, a two-layer facade – it serves as an imitation of a wave, and a facade that imitates container blocks.
