Location	Novosibirsk Oblast	
Square	200 m ²	
Year	2015	

A unique product that allows space expanding for life and creativity

The most effective solution to the housing problem is the formation of a system of compact settlements with a developed infrastructure. The main residential unit that can be built in a short time, thereby quickly satisfying the demand for individual housing, is a growing house. The peculiarity of this house is that in addition to assembling mobility, it is an energy-efficient technology and functioning according to the principle of an active house. The growing house accumulates energy, is independent of local suppliers, and can provide residents with the necessary heating. A growing house can easily be changed to suit the needs of residents: people can increase their living space and model the rooms.
